

Key Concepts

An **enlargement** changes the size of an image using a scale factor from a given point.

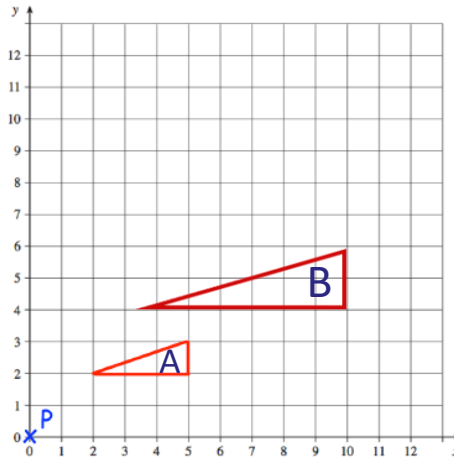

A **positive scale factor** will increase the size of an image.

A **fractional scale factor** will reduce the size of an image.

A **negative scale factor** will place the image on the opposite side of the centre of enlargement, with the image inverted.

Examples

Enlarge shape A by scale factor 2 from point P.

Enlarge by scale factor $\frac{1}{2}$ from point P.

Enlarge by scale factor -2 from (0,0).

Enlargement
Scale factor
Centre
Positive
Negative

Describe the **single** transformation you see on each coordinate grid from A to B:

ANSWERS: a) enlarge, centre (-4,2) scale factor 2 b) enlarge, centre (1,-2) scale factor $\frac{1}{2}$ c) enlarge, centre (0,1) scale factor -3

ANGLE FACTS INCLUDING ON PARALLEL LINES

Key Concepts

Angles in a **triangle equal 180°**.

Angles in a **quadrilateral equal 360°**.

Vertically opposite angles are equal in size.

Angles on a **straight line equal 180°**.

Base angles in an isosceles triangle are equal.

Alternate angles are equal in size.

Corresponding angles are equal in size.

Allied/co-interior angles are equal 180°.

Examples

$? = 360 - (65 + 110 + 87)$
 $? = 98^\circ$

Corresponding angles are equal

Questions

Calculate the missing angle:

PYTHAGORAS AND TRIGONOMETRY

The Birley Academy

Key Concepts

Pythagoras' theorem and basic trigonometry both only work with **right angled triangles**.

Pythagoras' Theorem – used to find a missing length when two sides are known
 $a^2 + b^2 = c^2$
 c is always the hypotenuse (longest side)

Basic trigonometry SOHCAHTOA –
 used to find a missing side or an angle

Pythagoras' Theorem

$$\begin{aligned} a^2 + b^2 &= c^2 \\ 6^2 + 8^2 &= x^2 \\ 100 &= x^2 \\ \sqrt{100} &= x \\ 10 &= x \end{aligned}$$

$$\begin{aligned} a^2 + b^2 &= c^2 \\ y^2 + 8^2 &= 12^2 \\ y^2 &= 12^2 - 8^2 \\ y^2 &= 80 \\ y &= \sqrt{80} \\ y &= 8.9 \end{aligned}$$

Examples

$$\begin{aligned} \sin x &= \frac{8}{10} \\ x &= \sin^{-1}\left(\frac{8}{10}\right) = 53.1^\circ \end{aligned}$$

$$\begin{aligned} \cos 48 &= \frac{x}{38} \\ x &= 38 \times \cos 48 = 25.4m \end{aligned}$$

Questions

Find the value of x .

ANSWERS: a) 8.06m b) 5.94m c) 55.15° d) 2.34cm

THE SINE AND COSINE RULE

The Birley Academy

Key Concepts

Sine rule

To calculate a missing side:

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$

To calculate a missing angle:

$$\frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c}$$

Cosine rule

To calculate a missing side:

$$a^2 = b^2 + c^2 - 2bc \cos A$$

To calculate a missing angle:

$$\cos A = \frac{b^2 + c^2 - a^2}{2bc}$$

Area of a triangle using sine

$$\text{area} = \frac{1}{2} ab \sin C$$

sparx
U164

Key Words

Sine
Cosine
Side
Angle
Inverse
2D

Examples

$$\frac{x}{\sin 35} = \frac{7}{\sin 42}$$

$$x = \frac{\sin 35 \times 7}{\sin 42}$$

$$x = 6.0 \text{ cm}$$

$$a^2 = b^2 + c^2 - 2bc \cos A$$

$$x^2 = 4^2 + 7.5^2 - 2 \times 4 \times 7.5 \times \cos 42$$

$$x^2 = 27.66$$

$$x = \sqrt{27.66} = 5.26 \text{ cm}$$

$$\frac{\sin x}{4} = \frac{\sin 42}{7}$$

$$\sin x = \frac{\sin 42 \times 4}{7}$$

$$x = \sin^{-1} \left(\frac{\sin 42 \times 4}{7} \right)$$

$$x = 22.5^\circ$$

$$\cos A = \frac{4^2 + 7.5^2 - 8^2}{2 \times 4 \times 7.5}$$

$$A = \cos^{-1} \left(\frac{4^2 + 7.5^2 - 8^2}{2 \times 4 \times 7.5} \right)$$

$$A = 82.1^\circ$$

$$\text{area} = \frac{1}{2} \times 4 \times 7.5 \times \sin 50$$

$$\text{area} = 11.49 \text{ cm}^2$$

- 1a) Calculate x
- b) Calculate the area of the triangle

- 2a) Calculate x
- b) Calculate the area of the triangle

PROBABILITY TREE DIAGRAMS

The Birley Academy

Key Concepts

Independent events are events which do not affect one another.

Dependent events affect one another's probabilities. This is also known as **conditional probability**.

Examples

There are red and blue counters in a bag.
The probability that a red counter is chosen is $\frac{2}{9}$.
A counter is chosen and **replaced**, then a second counter is chosen.
Draw a tree diagram and calculate the probability that two counters of the same colour are chosen.

There are red and blue counters in a bag.
The probability that a red counter is chosen is $\frac{2}{9}$.
A counter is chosen and **not replaced**, then a second counter is chosen.
Draw a tree diagram and calculate the probability that two counters of the same colour are chosen.
